

Our centerlines are far more accurate than Tele Atlas and NAVTEQ when overlaid with satellite imagery such as ESRI World Satellite Imagery Google Earth and Bing.

As shown in the images below, DataMap line segments (in red) overlay perfectly in between Bing's houses and county parcels. NAVTEQ's line segment, labeled Jesse (in green) goes directly over Bing's houses (see the additional box on the side) and is not proportioned to the actual development.
